Abstract

This paper explores the vision of Mahatma Gandhi for an education system that promotes knowledge, character, self-reliance, and social responsibility, and examines how modern India is progressing toward becoming a global education hub. Gandhiji believed that education should empower individuals through holistic learning, practical skills, moral values, and inclusive development. In recent years, India has strengthened its education sector through digital transformation, policy reforms, international collaborations, and the expansion of higher education institutions. Initiatives such as the National Education Policy (NEP) 2020, digital learning platforms, research and innovation ecosystems, and skill-based education have enhanced the quality and accessibility of education. These developments have attracted students from across the world, reinforcing India's position as an emerging center for academic excellence and innovation. The paper highlights the role of technology, sustainable educational practices, and global partnerships in realizing Gandhiji's dream of an enlightened and self-reliant society. It concludes that continuous investment in quality education, research, inclusiveness, and internationalization will further establish India as a leading global education destination while preserving the values envisioned by Gandhiji.
