

Educational Technology, Computer Systems, and Computational Innovations

Pawan Kumar Pandey, Assistant Professor, Department of Computer science, Digvijay Nath P.G College Gorakhpur

Abstract

The International Conference on Educational Technology, Computer Systems, and Computational Innovations provides a global platform for researchers, academicians, and industry professionals to exchange ideas on emerging trends in digital education and advanced computing. The conference focuses on the integration of innovative educational technologies, intelligent computer systems, and modern computational techniques to enhance teaching, learning, and problem-solving capabilities. It highlights advancements in artificial intelligence, machine learning, cloud computing, and data-driven educational tools that are transforming traditional education systems. The event encourages interdisciplinary research and collaboration to address challenges in developing efficient, scalable, and smart learning environments for the future.

Keywords:- Educational Technology, Computer Systems, Computational Innovations, Artificial Intelligence, Machine Learning, Digital Learning, Smart Education, Cloud Computing, Data Science, E-Learning Systems
